

CLAYDON DRILLS TO HOLD OPEN DAYS IN SCOTLAND

Developed and patented by Jeff Claydon from his farm in Suffolk in the east of England, the Claydon Strip Seeding System is now used in 26 countries, across a wide range of climatic conditions and soil types.

The Claydon System allows growers to establish a wide range of crops directly into stubble, min-tilled or fully-cultivated soils, five times faster and at one-third the cost of a plough-based system, with significant yield and environmental benefits. The highly effective twin-tine system encourages the crop to develop very deep, complex rooting structures quickly, which minimises soil erosion and ultimately leads to stronger, healthier crops with improved yield potential.

Claydon now supply their machinery, which along with the Hybrid direct strip seeding

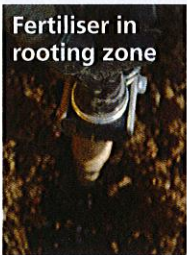

drills include straw harrows and rolls, to countries across the world from Chile to New Zealand, and Sweden to Spain.

Scotland represents a growing market for the UK manufacturer, with over thirty Claydon machines now in operation from Elgin in the north to Melrose in the south. The fertiliser placement options are proving especially popular. Claydon drills are the ideal machines to take advantage of targeted fertiliser placement within the seeding and/or rooting zone ensuring that fertiliser is exactly where the plant needs it. This avoids fertiliser being wasted on the 50% of ground

that is not disturbed; nutrients are available to the young seedling and not to weeds or volunteers, providing better utilisation and a potential fertiliser cost saving.

For anyone who would like to learn more about the Claydon system, the company is holding two open days in Scotland in May. This is an ideal opportunity to speak directly to Claydon customers and find out about their experiences and to view their crops. Claydon representatives will be on hand for discussions and Ross Agri, Claydon dealer in the north of Scotland, will be joint hosting the Open Day in Inverurie. For further details please see advertisement below and get in touch to find out how Claydon can benefit you and your crops.
