

LAMMA 17

Claydon launched its new Hybrid T3 with the trailed conversion kit at LAMMA.

Drill delights

LAMMA saw the launch of Claydon's new 3m trailed Hybrid T3 drill. It has a typical daily output of 20ha, says the company, and is suitable for use behind a 150hp tractor. The drill is supported on the lower link arms and incorporates a 2455-litre hopper, which can be used for seed only or divided to provide a 50:50 split between seed and fertiliser.

Measuring 6.6m long and 2.5m high, the new model incorporates support wheels with 10.00/75-15.3 deep-cleated tyres that run on clean, dry, uncultivated ground to ensure an even seeding depth. With a transport width of 3m, the T3 has an unladen weight of 2650kg.

Claydon also offers a kit to enable customers who already own a 3m Hybrid M3 mounted drill to convert it to the new trailed specification.

The Horsch stand featured the company's new mounted Maestro drill featuring pneumatic single-grain technology. Available in either 8-row with 70cm, 75cm and 80cm row spacing or 12-row configurations with 45cm or 50cm
